

What to Expect from a Laboratory Visit From the Office of Chemical Safety

The Laboratory Visit Program is an educational and advisory opportunity designed to improve the overall safety of campus laboratories. The program utilizes the expertise of UW-Madison's Environmental Health and Safety Department to identify potential safety hazards and to raise the level of awareness of Principal Investigators (PI's) and lab staff on the safety and regulatory requirements for their specific labs. It is also an outlet for faculty, staff, and students to bring their questions and concerns to EH&S staff.

Areas of Review:

- Documentation (training records, Standard Operating Procedures, Laboratory Chemical Hygiene Plan)
- Egress and Housekeeping
- Emergency Equipment
- General Safety (machine guards, refrigerators, electrical safety)
- Chemical Safety (storage, usage, labeling)
- Compressed Gases
- Disposal of Chemical Waste and Unwanted Chemicals
- Personal Protective Equipment (PPE)
- Ventilation and Engineering Controls
- Regulatory codes and other requirements (OSHA, EPA, Building Codes, university requirements)

How We Do It:

A review of the laboratory requires the presence of the PI or other knowledgeable person. We need to understand the processes in the lab in order to do an effective review of your lab's operations. We will walk through the lab spaces together and use the *Laboratory Safety Visit Checklist* (which is attached to this document) to ensure that we cover some of the more basic requirements of laboratory safety. There is also a PowerPoint presentation that goes question by question through the checklist to explain what we are looking for.

At the completion of the Lab Visit:

After we have completed the *Laboratory Safety Visit Checklist* we will discuss what each lab is doing well along with areas that may need improvement. A written report with our recommendations will be sent to the PI and/or Lab Manager. The report will itemize any issues that we see and include suggestions for improvements – most of which can be accomplished quickly and at little cost to the laboratory. Some of the issues identified may require more effort from EH&S staff and the PI and therefore may take more time to implement. EH&S staff will work with you to provide solutions to identified issues.

Chemical Safety Laboratory Safety Visit Checklist

Principal Investigator:						
Lab I	Mana	ger/ (Chemical Hygiene Officer:			
Building: Room #:						
Yes	No	NA	Documentation			
			Is the emergency door card present and up to date?			
			Is a Chemical Hygiene Plan available?			
			Are laboratory Standard Operating Procedures available for all processes?			
			Are Safety Data Sheets (SDS) readily available?			
			Is the laboratory's chemical inventory available?			
			Have employees taken Chemical Safety Training, or received training in General			
			Safety Practices and the OSHA Laboratory Standard?			
			Have employees received training in Lab-Specific Procedures and Emergency			
			Response (spills, exposures)?			
			Are training records available?			
Yes	No	NA	Egress and Housekeeping			
			Are egress pathways kept unobstructed and free from trip hazards?			
			Is the consumption or storage of food or beverage prohibited in the laboratory?			
			Are benchtops and working surfaces kept clean and uncluttered?			
Ш	Ш	Ш	Are glass and other "sharps" disposed of appropriately?			
Yes	No	NA	Emergency Equipment			
Ш			Is an emergency safety shower and eyewash station readily available for immediate use?			
			Is an emergency eyewash station operational, inspected and flushed weekly?			
			Are eyewashes, emergency showers, fire extinguishers, & electrical panels kept accessible and unobstructed?			
			Is a chemical spill kit readily available and adequate for the work being performed?			
П	П	П	Do sprinklers have at least 18 inches of unobstructed clearance?			
			Is an appropriate fire extinguisher available?			
Yes	No	NA	Chemical Safety			
			Are all chemicals stored according to compatibility?			
			Are flammable, corrosive, toxic or reactive chemicals stored in approved chemical
