

Walk-In Autoclave Safety

Prevent burns and exposures by following safety guidelines when operating walk-in autoclaves.

1. Wear PPE when handling biohazardous items.

2. Emergency button shuts off all power to the unit preventing operation.

Ensure that no one is inside the autoclave when a cycle begins.

3. Stand back and allow the autoclave to fully vent before opening the door.

4. When removing sterile, hot items, use thermal gloves.
